

# Daily Health Screenings

Made Easy

**BRING YOUR OWN DATA**

**Temp Protect™** Powered by **BYOD™**

## Background

- Health departments everywhere have implemented daily health screenings for all venues as a requirement to resume operations.
- These venues are mandated to have all staff members respond to standard questions and record their temperature.
- The staff members must pass screening before entering the premises.

## Solution

- Temp Protect™ is a mobile application that screens individuals and generates a QR code for location scanning.
- The individuals' responses to health questions are linked to their temperature and QR code.
- The data is then encrypted and stored in a secure AWS cloud environment.
- Staff members are provided a 1-day work permit and must re-certify daily.

## How Temp Protect™ Works

### DAILY SURVEY

Captured via an Android or iOS device.

### THERMAL SCREENING

At the venue, temperature is taken with either a handheld, wireless or thermal device.

### CERTIFICATION

Upon completion of the screening, staff will receive their certification.

## Key Benefits

- Entry to venues is quick and touchless.
- Enroll in minutes, certify in seconds.
- Personal data is encrypted and always protected.
- Record up-to-the-minute health screening.
- All employees are certified as COVID-19 symptom-free based on CDC and State Health Department guidelines.
- If an employee fails the screening, they cannot enter the venue and cannot re-certify for seven days. The solution tracks and manages this scenario.

## Ease of Implementation

- The solution can be operational in less than 30 minutes.
- Call center provides user support.
- As screening requirements change, re-configuration can occur in minutes.
- Each venue has configuration and user control via admin capability.
- A detailed user guide will be provided to the administrator. Remote training is available.

## Value Proposition

- Temp Protect™ meets all CDC guidelines and state and local directives.
- Low administrative and operational overhead.
- Secure and protected personal data.
- Temp Protect™ is a green and paperless solution.
